

Verification & Security Checklist

1. Quick Wins & UI Enhancements

- [] Confetti: Place an order from the cart; verify confetti appears on success.
- [] "My Orders" Link: Verify it appears in the Customer Header and works.
- [] Category Jump: On the Menu page, click categories; verify the page scrolls to them.
- [] Need Help Footer: Verify WhatsApp and Call links appear at the bottom of the customer app.
- [] Audio Alerts: Enable sound (toggle) in Kitchen Display; verify a chime plays for new orders.
- [] Keyboard Shortcuts: In Staff Layout, press Shift + C for Cashier, Shift + K for Kitchen.
- [] Reduced Motion: Set OS to "Reduce Motion"; verify confetti/animations are disabled.
- [] Estimated Prep Time: Check Kitchen Display to see the sum of prep times for active orders.
- [] Dashboard Chart: Go to Dashboard; verify the Y-axis (e.g. "SAR 32") is fully visible, not cut off.

2. Cart & Flow Fixes

- [] Item Detail: Add an item with options/modifiers to cart; verify it succeeds without crashing.
- [] Cart Layout: Open Cart; verify the "Place Order" button and total section look correct and stick to the bottom.
- [] Quantity Toggles: In Cart, use + and - buttons; verify quantity updates.
- [] Cart Swipe: Swipe left on a cart item to reveal the delete button.
- [] Localization: Switch language to Arabic; verify "Add More" appears in the Cart.

3. Staff & Admin Fixes

- [] Health Monitoring: Check OS Admin -> System Health; verify API Server and Database show as OK.
- [] Data Backup: Check OS Admin -> Settings; click the "Download Backup" button.

4. Security & Hardening Tests (Manual)

- [] CSRF / Origin Check (Login): Open DevTools Console on localhost:5174. Run a manual fetch POST to /api/v1/auth/login. Expected: Fails with 401 Invalid origin.
- [] NoSQL Injection (Auth): On the staff login screen, enter {"\$gt": ""} as the email or password. Expected: The system rejects it rather than bypassing authentication.
- [] Rate Limiting: Repeatedly click "Sign in" with wrong credentials very fast. Expected: You receive a 429 Too Many Requests error.
- [] XSS Protection: Add an item to the cart and enter <script>alert(1)</script> in the "Note for Kitchen" field. Expected: In the Kitchen display, the note is shown as plain text, not executed as an alert.
